Contributor

Dan Huston, CPA, CFIRS

Dan has worked in the banking industry since 1979 and has extensive knowledge of bank operations, lending, and related compliance. His focus is compliance with Federal regulations, product development, and processing efficiency.

Dan directs the firm's internal audit and regulatory compliance services for financial institutions. Dan's areas of expertise include credit underwriting and lending compliance, anti-money laundering program administration, item processing, funds delivery, fiduciary services, loan origination and servicing, and trust and fiduciary operations.

Introduction:

What is Vendor Risk Management?

Cost control, efficiency of process, and the globalization of the ARM industry have significantly increased the use of outside vendors to manage everything from the telephony systems we use, to the letters we send, to the individuals speaking to our customers.

With that expansion of outsourcing there is a risk of those tasks being done incorrectly or outside of compliance with either your policies or regulatory guidelines. Recognizing, reviewing and remediation have become not just a good idea but a vital part of the relationships with your vendors. These vendors have become an extension of your company.

You must increase your review of these companies to ensure good corporate governance. You need to understand the risk they pose to your organization along with the obvious benefits.

Why you need to do this:

Regulatory changes are the primary reason most of the industry began to really look into vendor risk assessments. But there should be other driving factors in your efforts. Damage to your reputation, client requirements and finding potential legal issues are equally important and should play a part in your process.

What is involved in a Vendor Risk Management Program?

The program should be a formal process to identify and measure third-party risk, review the implications of that risk and build and implement controls with your vendors to mitigate that risk wherever possible.

It can look many different ways. It can be tracked in excel spreadsheets or entered into a number of good process management systems available to the industry. It should be driven by the core values of your company, augmented by your policies and procedures and ultimately enhance the consumer experience by ensuring quality and accuracy in your dealings with those consumers.
